

Blackmer Centrifugal Pump Installed in Toughest Application, Provides Trouble-Free Operation for More Than 5 Years

A U.S.-based manufacturer of liquid detergents, dish detergents, and fabric softeners was experiencing chronic seal failures with an existing pump in one of its critical plant applications. In this application, the pump was transferring raw materials to the pre-mixer and mixer. Due to the seal failures, the plant was spending a large amount of time servicing the pump, which resulted in additional downtime and product loss.

The company replaced its existing centrifugal pump with a Blackmer System One® LD-17 centrifugal pump. Designed around the seal where 90% of pump failures occur, the System One® has a larger, heavy-duty shaft and ball bearings resulting in the widest operational window off the BEP than any standard process pump.

As a result of the change, the manufacturer received more than 5 years of trouble-free operation from the System One® LD-17. The company was so happy that today it currently has more than 125 System One® pumps in service throughout its operation.
