

LOW OIL PRESSURE SWITCH

NEMA 7: Part number 790268, Option number 777821

NEMA 4: Part number 790486, Option number 777874

This switch provides a signal whenever the compressor's crankcase oil pressure falls below 12 psig, thus preventing costly damage in the event of a lubrication failure. The device includes a fixed set point pressure switch and a 10 second delay timer to lock the switch out of the circuit during compressor startup. Both NEMA 4 and NEMA 7 enclosures are available.

Electrical Connection: 1/2" FNPT	Pressure Connection: 1/4" FNPT
Weight: 6 lb.	Pressure Set Point: 12 psig
Voltage: 19 - 240 VAC	Time Delay Lockout: 10 sec
NEMA 7 Enclosure: UL and CSA listed for	Class I, Groups C & D Class II, Groups E, F, & G
